

512 Observatory Street
Nelson, BC

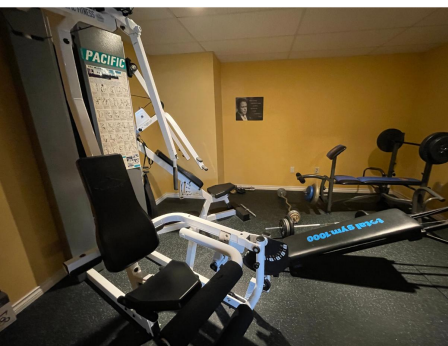

Custom-built home

Set on a large lot in Uphill, this 2011 built home was designed to blend amongst the heritage homes in the area. You will be impressed by the layout of the four bedroom, 4 bathroom home with a legal one bedroom suite above the attached garage. As you walk in the front door you will see the open concept living space with timberframe accents. The kitchen features granite countertops, lots of storage (including a large walk in pantry), gas stove and island. The focal point is the gas fireplace, but you will see lots of well thought out details in this area - live edge shelves, sunny window seat, bar and engineered hardwood flooring. This floor has an office, powder room, laundry room and even a mudroom as you enter the home from the garage. Check out the full description in the listing
